Get the latest version via File Clearinghouse. the distance between two viable EBs and one nonviable EB. No significant difference was observed between the control group and the E3 group (Figure [8](#fba21088-fig-0008){ref-type="fig"}A, B). However, the number of EBs in the E1 group was greatly decreased compared to the control and E3 group (Figure [8](#fba21088-fig-0008){ref-type="fig"}A, B). The number of EBs in the E2 group was decreased slightly compared to the E1 group. A similar tendency was also observed in the number of EBs in the E3 group (Figure [8](#fba21088-fig-0008){ref-type="fig"}A, B). 4. DISCUSSION {#fba21088-sec-0012} ===== In the present study, we successfully established a condition for differentiation of human iPS cells into early stage RPE cells, using our novel culture condition with RPE-conditioned medium. We used three small molecules as pluripotency-induction agents for optimizing this culture condition. We found that the reprogramming efficiency and probability of differentiation into early RPE cells increased gradually with the increase in the concentration of each small molecule (5-aza, SB431542, and SU5402), although a certain concentration in 79a2804d6b
